GerberColor **SpectraTint**^{TM} and **SpectraShade**^{TM} **Foils**

GerberColor Spectra foils are designed for overprinting to modify the appearance of base color foils. Use these foils to produce a wider range of EDGE-printed spot colors, to better match hard-to-hit corporate identity program colors or to create special shading effects on shapes and large text. All effects are achieved with solid fill printing. **SpectraTint** has been designed to lighten the appearance of the base color, while **SpectraShade** will darken it. Both foils have been formulated for outdoor use for up to three years. Spectra foils can triple the range of spot colors that are printable with a shop's current inventory of foils.

PermaGrip	15" Punched EDGE READY	
Color	**10 Yard**	**50 Yard**
White	AP75517 -10y	AP75517 -50y

Gerber PermaGrip is a durable, permanent cast vinyl film for use with Gerber EDGE Systems and GerberColor foils. It is dimensionally stable and has an extremely aggressive pigmented adhesive system that provides superior hiding power when applied over colored surfaces. Gerber PermaGrip is edge-stripped to eliminate buildup of adhesive residue on sprocketed equipment. Gerber PermaGrip is ideally suited for a wide variety of commercial, industrial and safety applications. It can be used to create interior and exterior labels, emblems, logos and signs on many surfaces including, flat, moderately compound curved and moderately-rough surfaces and some low surface energy materials. The user should determine the suitability of all substrates prior to actual application. This film is not recommended for use on corrugated, riveted or highly irregular surfaces. It is not recommended for flexible sign face or flexible banner material. It is also not intended for applications where petrochemical contact may occur. If petrochemical exposure is anticipated, refer to the Product Bulletin for information on protecting graphics. PermaGrip Product Bulletin

Gerber **Routing Bits**

Gerber Platinum Specialty Bits

Gerber Platinum Specialty bits take the guesswork out of choosing the correct bit for a specific substrate. Gerber Platinum bit descriptions include an application code which identifies materials and applications for which the bit is most suited. The application code is etched into the shank of the bit, along with the part number, for easy identification once the bit has been removed from its sleeve. Routing and Engraving Bits Catalog

Gerber Gold™ Routing Bits

Gerber Gold routing bits are designed for greater performance and longer tool life. These remarkable routing bits are made from the highest quality micrograin carbide to the tightest tolerances in the industry. They are then coated with titanium nitride to enhance their durability even further. The result is superior edge quality and lower tooling cost. These high performance bits can be used with all Gerber routers/engravers, as well as with other automated and manual routers.

Two-Flute Spiral Bits
These are the most versatile type of bits and are used for general routing of the following materials:
- Harder Materials: Such as plate aluminum, brass, bronze, copper; cast acrylics, solid surface materials, particle board, plywood, and hardwoods.
- Softer Materials: Such as foam boards, engraving stock, PVC (Sintra®, Komatex, Trovicel®, Celtec, etc.) soft plastics, soft woods, and similar density materials.

These bits provide excellent chip removal from the cut because of the upward spiral action. They also assure excellent edge quality on these materials.

Single-Flute Radial Bits
These bits are ideal for cutting sheet aluminum and brass with a thickness of .060" (1.5mm) and less, as well as soft woods and soft alloy aluminum. Unlike the spiral flute bits, these bits have a single straight cutting edge which doesn't pull up on the work piece. This straight flute allows the bit to "shear" the chip off at the top edge of the material being cut without leaving a burr. The chip extraction, however, will not be as good as with a spiral bit.

Shank Diameter	Cutting Diameter	Cutting Edge Length	Overall Length	Part Number	
1/4"	3/16"	5/8"	2"	P50533B	
1/4"	1/4"	3/4"	2-1/2"	P50534B	
1/4"	1/4"	1-1/2"	3-1/2"	P50535B	

Three-Flute Spiral Tapered Bits
For use on all materials listed for two-flute spiral bits. Tapered bits produce an angle on the edge of the material being cut. As a result, these bits are excellent for cutting vacuum form molds. These bits can also be used to create a "halo" effect without incurring additional cost when other than a straight edge is desired for special applications,

Auto-Carve™ 3D Carving Bits

Gerber V-cutting carbide bits deliver superb cut quality, maximum cutting efficiency, and the longest possible tool life. These specifically designed tools are produced within extremely tight manufacturing tolerances, ensuring the level of accuracy essential to the automated carving process.

Design considerations that impact tool selection:
For Small, Intricate Graphics with Thin Stroke Widths: Choose a tool with a steep angle, such as the 90° tool.

For Large Graphics with Wide Stroke Widths: Choose a tool with a shallower angle, such as the 150° tool.

Shank Diameter	Tool Diameter	Tool Degree	Part Number	
1/4"	1 1/4"	90°	P56371A	
1/4"	1 1/4"	120°	P56374A

Gerber Engraving Bits

Gerber also offers high quality, long and short type industry standard engraving bits. Designed to give excellent results with Gerber equipment, they also work with other routers/engravers. Gerber engraving bits are ideal for applications using Dimension Plus®, ROWMARK®, acrylic, polycarbonate, and other plastic materials.

Engraving Bits (Long Type)

Other Gerber Specialty Bits

Braille / Tactile Bits
These bits are used to create ADA (Americans with Disabilities Act) compliant signs. All have shank diameters of 1/4" (6.0mm).
- The Long Type for use with Dimension 200®, ADVANTAGE Router™ 600 and Sabre™ Engraver Options.
- The Short Type has the same tip geometry as the Long Type, but is cut shorter for use in a Router Motor or High Frequency Spindle Option.

Description	Use	Part Number Long Type		Part Number Short Type	
Braille Cutter	For cutting Braille dots	P47763A		P47849A	
.015" Profile Cutter	For cutting ADA sign borders and surface-mounted text	P50624A		P50622A	
.060" Parallel Cutter	For cutting both letter clean-out pockets in the sign face and matching male characters for Auto-Inlay™ method)	P50623A		P50625A	

Table Surfacing Bits
For use with a Router Motor or High Frequency Spindle to mill the sacrificial table surface perfectly flat in respect to the Z axis and aid in precise depth control when cutting.
