GerberColor™-Finishing (GCF) Series Foils

♦ Abrasion Guard™ SPF (Sign Protection Formula)
♦ Matte Clear finishing (discontinued)

DESCRIPTION
GerberColor™ Finishing (GCF) Series Foils are durable, dimensionally stable, resin-based, pigmented foils designed for use with the GERBER EDGE®, GERBER EDGE 2®, and GERBER EDGE FX™ thermal transfer printing systems, in conjunction with EDGE READY™ materials.

The Finishing Series Foils have been developed primarily for overprint applications, which enhance the durability and/or the appearance of printed images, and consist of:

♦ Abrasion Guard™ SPF (GCF-214)
♦ Matte Finish (GCF-334) (discontinued)

INTENDED APPLICATIONS
Abrasion Guard SPF (Sign Protection Formula) is specifically designed to improve the UV resistance of EDGE-printed graphics. This clear, topcoat GerberColor Foil also protects graphics from moderate abrasion from contact or handling. It has an expected performance life of five years (when printed by itself). When applied as a protective overprint on other GerberColor Foils, Abrasion Guard SPF will extend the life of the base color by up to 30%.

Matte Clear is designed to reduce the gloss level of printed graphics or cut vinyl. Graphics and vinyl that have been overprinted with Matte Finish will have their gloss level reduced by 60%.

If extreme petrochemical contact is anticipated, refer to the Gerber Guard™ manufactured by 3M and Gerber Guard™ 9 manufactured by 3M Product Bulletins.

PERFORMANCE LIFE
When printed on EDGE READY materials and applied vertically on stationary, non-vehicle sign applications, GerberColor Abrasion Guard SPF has an expected performance life of up to five
years (when printed by itself). When applied as a protective overprint on other GerberColor Foils, Abrasion Guard SPF will extend the life of the base color by up to 30%. Matte Finish has an expected performance life of three years.

Performance statements are based upon laboratory and/or lifetime tests that we believe are reliable. Exposure angle, environmental conditions and maintenance of markings will affect ultimate performance.

Continuous exposure in regions that experience maximum sunny days will result in decreased performance.

SHELF LIFE AND STORAGE

Printed graphics should be applied within one year. GerberColor Foils, film and printed graphics (with or without pre-mask) should be kept in a clean area free from excessive moisture and direct sunlight. Store foils at 40°F to 90°F (4°C to 32°C) and 40% to 60% humidity. When not in use, cartridges should be kept in their package sleeves. Use a paper interleaf between printed materials that are stacked or rolled. Do not store printed graphics face to face.

PRINTING

GCF Foils are compatible with EDGE READY materials in overprint combinations with the following GerberColor Series - GerberColor Spot (GCS), GerberColor Process Pro™ CMYK (GCP), and GerberColor Transparent (GCT).

Abrasion Guard SPF will be included as the last foil in a print when the Abrasion Guard box is checked in the QuickPlot print settings screen.

♦ Beginning with OMEGA™ version 2.6.1, downloads to update the plot files with unique Abrasion Guard SPF settings are available from the Gerber web site (www.gspinc.com). If for some reason this download is unavailable to you then use the standard Abrasion Guard settings.

Recommended working environment is as follows:

- Operating temperature: 50°F to 95°F / 10°C to 35°C
- Recommended temperature for assured printing accuracy: 68°F to 78°F / 20°C to 26°C
- Operating humidity: 20% to 90% relative humidity, non-condensing (maximum range; actual range varies by material used)

PROTECTING GRAPHICS

Gerber Technology offers products that are designed to protect vinyl and printed graphics.

Gerber Guard™ is a durable, dimensionally stable, glossy vinyl overlaminate. This film has a petrochemical-resistant construction and is intended to be used when markings may be exposed to petrochemical spillage and/or severe handling conditions.

Gerber UVGuard™ is a custom-formulated, 1-mil, clear, polyvinyl fluoride (PVF) laminating film designed to further expand the resistance to weathering of printed graphics up to five years.

Gerber UVGuard™ 9 manufactured by 3M is a 2-mil, glossy, clear, mildew-resistant, polyvinyl fluoride laminating film with a petrochemical-resistant adhesive system. It is designed to further expand the resistance to weathering of printed graphics up to nine years. Gerber UVGuard 9 has the highest protection from UV fade.
Gerber StrikeGuard™ is an 8.0-mil, clear, glossy overlaminate film designed for a variety of applications. This heavy-duty overlaminate film is ideal for the protection of graphics, up to two years, and is especially beneficial where printed graphics experience severe handling and forceful impact. Gerber StrikeGuard is not recommended in applications that require petrochemical protection or where additional UV or vandal resistance is desired.

Abrasion Guard™ SPF (Sign Protection Formula) is a clear, top-coat GerberColor Finishing Series (GCF) Foil designed for use with EDGE® Series thermal transfer printing systems, to protect graphics from moderate contact and exposure to harmful effects of UV rays. It has an expected performance life of five years (when printed by itself). When applied as a protective overprint on other GerberColor Foils, Abrasion Guard SPF will extend the life of the base color by up to 30%.

Matte Clear (discontinued) is a clear matte finish, top coat GerberColor Foil designed for use with EDGE® Series thermal transfer printing systems, to reduce glare and protect graphics from moderate contact or handling. It has an expected performance life of three years.

APPLICATION TECHNIQUES
When transferring EDGE-printed graphics, Gerber standard tack application tape is required. Printed graphics should be allowed to cure for 15 minutes prior to application of transfer tape.

MAINTENANCE
To clean printed graphics, use a mild, non-abrasive soap with a soft cloth or sponge. Avoid using alcohol-based cleansers or soaps containing grit or abrasives. Automated vehicle washing systems that use rotary cleaning brushes should be avoided.
